**RESTORING INTEGRITY
AND TRUST**

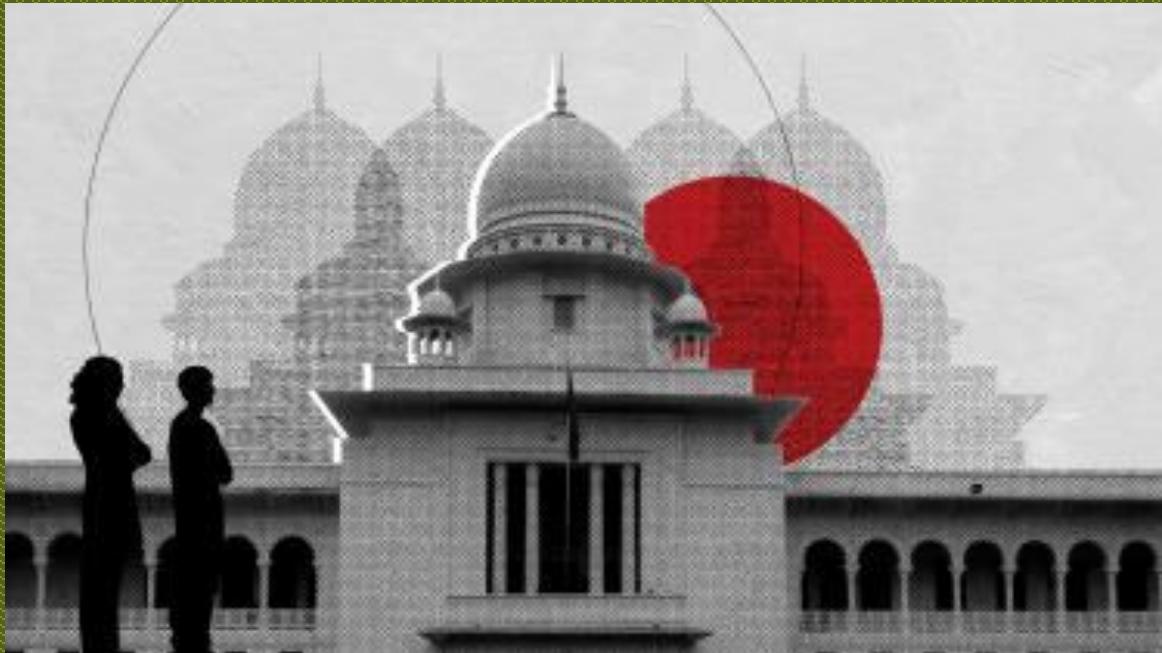

1. Eliminating Corruption

- Much of corruption is *systemic*.
- Recommendations:
 - Targeted, bottom-up reforms in high-impact sectors.
 - Simplifying regulations so they are reasonable to follow.
 - A public campaign on values and integrity.
 - An alternative reform programme for the Anti-Corruption Commission, emphasising predictability rather than more powers.

2. Judicial Reform

- The judiciary is formally independent, but politically compromised in practice.
- Recommendations:
 - Put the seniority convention for Chief Justice appointments on a statutory footing.
 - Establish a Judicial Appointments Commission with transparent procedures.
 - Monitor Bar Council elections to prevent partisan interference.
 - Digitise case management to reduce discretionary control over case progress and listings.

3. Civil Service Reform

- Challenges:
 - Weak analytical capacity
 - Fragmented training
 - Prolonged donor influence
 - Politicisation
- Recommendations:
 - In-house policy research and training units
 - Promotions linked to demonstrated competence
 - Public Appointments Commission for leadership roles
 - A Civil Service Code enshrining neutrality

4. Civilian Security Forces Reform

- Bangladesh's security forces have not fulfilled their crime-fighting potential due to politicisation, corruption and a sense of impunity.
- Recommendations:
 - A new Civilian Code for Use of Force prioritising de-escalation and proportionality.
 - Merit-based, predictable systems for recruitment, promotion, pay and postings.
 - Restructure the Police Commission and National Human Rights Commission to prevent political capture.
 - Community policing through local social structures.

STRATEGIES FOR NATIONAL GROWTH

5. Economic Policy

- Bangladesh faces urgent, neglected macroeconomic challenges:
 - Persistent inflation
 - Rising debt
 - High non-performing loans (NPLs)
 - Narrow tax base
 - Fragile foreign exchange reserves
- We lead on governance reform:
 - Increasing autonomy for the Bangladesh Bank
 - A unified exchange rate
 - Increasing tax compliance before broadening the base
 - A package of financial sector and SOE reforms

6. Population and Demography

- This is a hugely misunderstood issue.
- Fertility in Bangladesh has fallen to replacement level, and the global trend is for such declines to drop much further.
- Fewer births means fewer future workers, and fewer future parents. If it continues, a sudden acceleration in ageing, economic decline and a care crisis will hit Bangladesh within decades.
- Evidence from low-fertility countries shows that financial incentives cannot reverse what is essentially a change in social norms.
- A range of non-coercive reforms are proposed to policies which are closely linked with fertility decline:
 - Family planning policies promoting small families.
 - Embedding increase of female labour force participation as a policy target.
 - Education structures which assume students are not parents.
 - Ban on marriage under 21 (male) and under 18 (female).
- Stopping to incentivise decline won't be enough – much more research is needed on what policy levers could help stabilise the population.

7. ICT

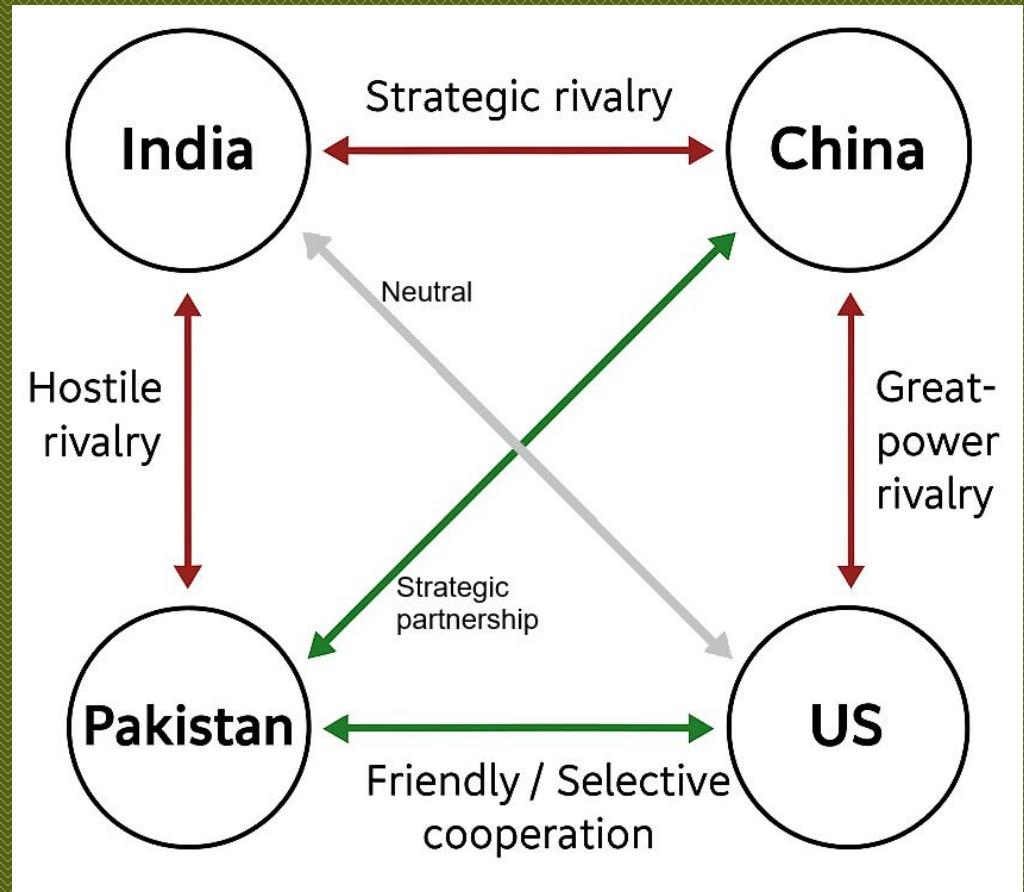

- Bangladesh holds the foundation for rapid digital transformation:
 - Strong mobile penetration and improving broadband infrastructure
 - A vibrant entrepreneurial youth
- Gaps remain:
 - Uneven digital access in rural areas
 - Skills mismatches between graduates and industry
 - Nascent cybersecurity capacity
 - Regulatory uncertainty for digital services
 - Limited early-stage capital for startups
- We recommend:
 - Last Mile Connectivity Fund
 - Startup acceleration
 - Education matched to skills and the future
 - Strengthening cybersecurity capacity
 - Actively participate in international bodies and adopt global standards, including in data protection

STRENGTHENING SOVEREIGNTY THROUGH DIPLOMACY AND DEFENCE

8. Foreign Policy

- Proximity to great powers and geopolitical rivalry in Asia places pressure on Bangladesh's sovereignty.
- Bangladesh must position itself as an "Equal Friend to All", engaging with all major powers and regions, while avoiding subordination to larger actors or entanglement in rivalries.
- Stable relations with India and China must be complemented with diversification to reduce dependence.
- The Muslim world and Middle East offers underused strategic depth, large markets and an opportunity to cooperate on defence capability without wider geopolitical alignment.

9. Defence

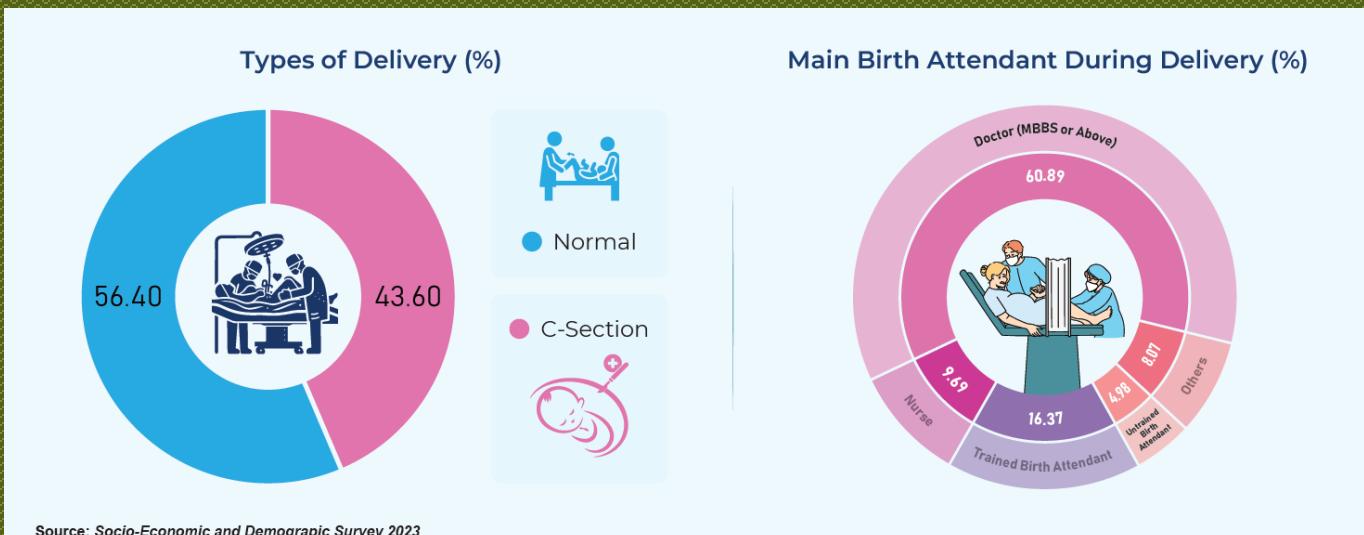

- Bangladesh faces a tougher and more coercive security environment.
- Defence policy must focus on protecting sovereignty and resilience.
- Recommendations:
 - A smart, professional and neutral military built for deterrence, not size.
 - Strong civilian oversight, and legal guarantees of political neutrality.
 - A trained national reserve through one year of universal military training to strengthen mobilisation and social resilience.
 - Invest in low-cost, high-impact capabilities like drones, cyber, surveillance, and domestic defence industry.

DEVELOPING INFRASTRUCTURE FOR A RESILIENT SOCIETY

10. Health

- Bangladesh needs a people-centred, morally grounded health system that protects households and delivers care fairly.
- Recommendations:
 - Make primary care the backbone through a national Minimum Essential Service Package and strong referral pathways.
 - Protect families from financial ruin with a tiered Catastrophic Health Protection Fund for high-cost care.
 - Regulate and govern the system with drug quality control, hospital ethics oversight, and accountable public–private rules
 - Reduce over-medicalisation by enforcing standard treatment guidelines and team-based, nurse/midwife-led care models.

11. Education

- Bangladesh's education system needs to move from exam-focused credentials to real skills for life and work.
- Recommendations:
 - A unified basic education encompassing capabilities like literacy, numeracy, communication, digital skills, Islamic studies and vocational learning.
 - Make technical and vocational education a first-class pathway with strong industry links and work-based learning.
 - Improve teacher quality through better recruitment, training, evaluation, and continuous professional development.
 - Refocus universities on applied and professional programmes with clear labour-market value instead of expansion for its own sake.

12. Agriculture and Food Security

- Bangladesh must shift agriculture from import dependence to resilient, self-reliant food systems.
- Recommendations:
 - Invest in storage, cold chains, research, and modern mills to cut post-harvest losses and reduce imports.
 - Support small farmers with better seeds, training, storage, and direct access to markets to raise productivity and incomes.
 - Promote crop diversification and value-added processing to strengthen food security and rural livelihoods.
 - Use by-products and sustainable practices to boost efficiency and environmental resilience.

13. Environment and Climate Change

- Bangladesh faces a climate emergency, so policy must move from plans on paper to action on the ground.
- Recommendations:
 - Prioritise implementation by strengthening oversight, transparency, and anti-corruption controls in all climate funding and projects.
 - Replace one-size-fits-all engineering with locally grounded, ecosystem-based solutions that work with natural water and sediment systems.
 - Stop harmful practices like unplanned embankments, destructive shrimp farming, and poorly regulated urban expansion.
 - Align climate action with livelihoods by protecting agriculture, fisheries, and climate-vulnerable communities.

14. Transport

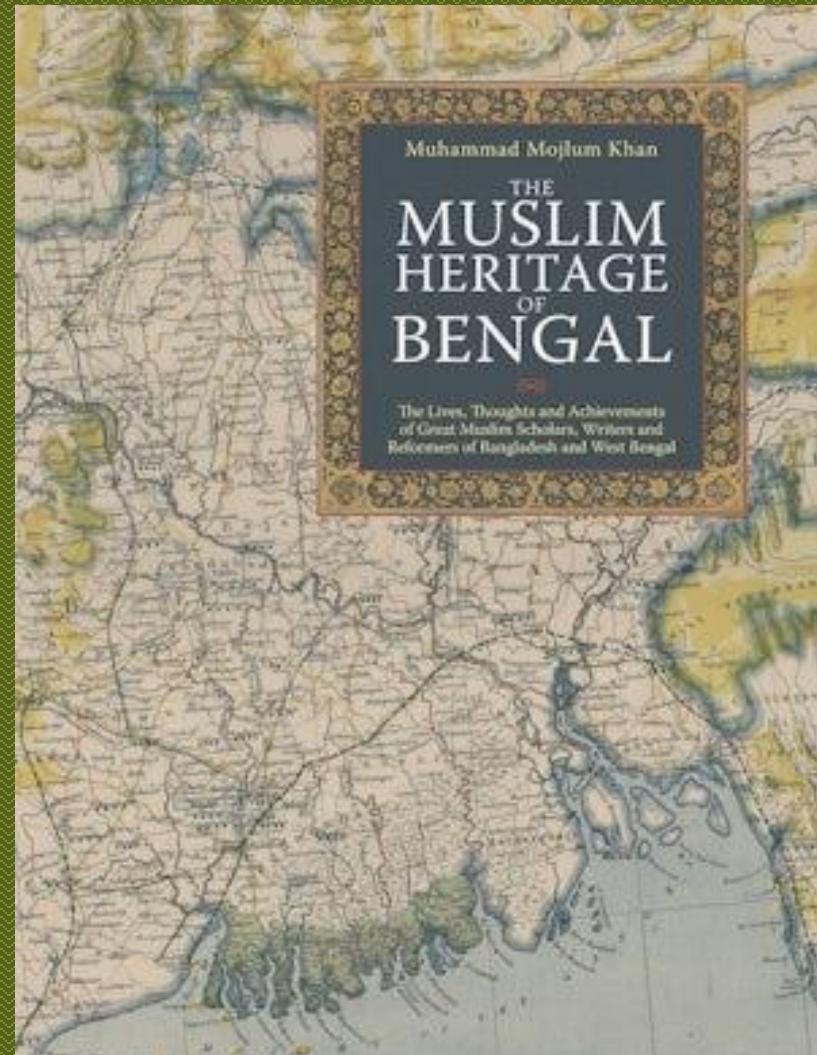

- Bangladesh's transport system needs to shift from expansion-focused projects to efficient, integrated, and people-centered mobility.
- Recommendations:
 - Focus on better use of existing infrastructure through maintenance, multimodal integration, and reliable operations.
 - Treat inland waterways as a strategic asset with dredging, modern terminals, and container-on-barge services.
 - Modernise rail for long-distance travel and freight with upgraded tracks, signalling, rolling stock, and intermodal hubs.
 - Design cities around high-capacity public transport, walking, cycling, and gender-sensitive urban mobility.
 - Link ports and logistics through multimodal corridors, digital customs, and harmonised standards to reduce costs.

CULTURE, INCLUSION AND MEDIA

15. Cultural Policy

- Bangladesh's cultural and intellectual life needs to be restored with confidence, coherence, and ethical grounding.
- Recommendations:
 - Strengthen public cultural institutions through merit-based leadership, independent boards, and transparent governance.
 - Integrate indigenous Islamic and Bengali intellectual traditions with modern education, scholarship, and public history initiatives.
 - Protect children from harmful digital content through age-based restrictions, safe platforms, and digital education.
 - Expand strategic cultural diplomacy and Global South partnerships to project Bangladesh's culture internationally.

16. Women and Disadvantaged Communities

- Inclusion in Bangladesh must be built on protection, justice, enforcement and functioning institutions, not just more declarations, unimplemented laws and untargeted spending.
- Recommendations:
 - Rather than an unpopular reform of religious inheritance law, end usurpation of women's inheritance under existing law through fast investigations, reliable prosecution, functioning courts, and clear administrative accountability.
 - Protect women through fast-track courts, First Information Report audits, forensic reforms, public-space policing, and targeted legal aid.
 - Safeguard religious minorities with rapid response teams, dedicated investigators, public communication standards, and faster land dispute resolution.
 - Support ethnic minorities through documentation, secure land rights, mobile registration units, and strengthened local administration.
 - Refocus the Ministry of Social Welfare on coordinating protection, linking vulnerable populations to justice, and monitoring real outcomes.

17. Media

- Bangladesh's media sector needs structural safeguards to protect independence, credibility, and public trust.
- Recommendations:
 - Protect journalists by removing criminal liability for lawful reporting, limiting frivolous prosecutions, and providing legal and security support.
 - Reduce government influence by making public broadcasting mandates clear and allocating advertising transparently.
 - Introduce balanced content regulation to tackle poor journalism and digital misinformation with civil remedies, right-of-reply mechanisms, and judicial oversight of digital takedowns.

Thank You
